CRYOSURGERY

Skin for Life®
...So Wear it Well

Cryosurgery is the selective destruction of lesions by causing cryogenic cell death.

The CryoPen can be used to treat common skin lesions such as:

Warts • Skin Tags • Moles • Lentigo • Molluscum
Actinic Keratosis • Seborrheic Keratosis
Dermatofibroma • Keloids • Condyloma
Non-recurrent Basal Cell
just to name a few

***The CryoPen is the latest technology in
Cryosurgery since the 80's.***

The CryoPen was designed to replace outdated cryosurgical instruments by using the newest cooling technology.
